Haunted Repo

Every bug is a ghost. Catch it.

A Halloween game where every GitHub issue becomes a monster.

Team **ByteForce**

DevForge x Hacktoberfest 2026 **30-31 Oct 2026, Bengaluru**

The Problem: A Haunted Forest

Scary big repos

A big repo looks like a dark, haunted forest.

No clear start

Nobody tells you which issue is easy or where to begin.

The first PR is a wall

Most people never send a single pull request.

Where do I start?

Which issue is easy?

How do I open my first PR?

Our Idea: Contributing as a Game

Paste any public GitHub repo. Its open issues turn into monsters in a dungeon.

1

Paste a repo

Use owner/repo or Demo mode.

2

Monsters spawn

Easy issues in Level 1, harder ones deeper.

3

Fix and earn XP

Real fix, real pull request, real rank.

Every Issue Is a Monster

NullPointer Wraith
bug, error, crash

Typo Bat
docs, typo, readme

Tiny Pumpkin Imp
good first issue

Feature Golem
feature, enhancement

Lag Zombie
performance

Vampire Leak
security

Flaky Test Skeleton
tests

Merge Conflict Demon
merge conflicts

Unknown Spirit
anything else

Level 1 The Graveyard
easy issues

Level 2 The Haunted Library
harder

Level 3 The Boss Crypt
hardest

How the Game Works

01
Enter the dungeon
Paste owner/repo or try Demo mode.

02
Pick a monster
Each card shows the issue title, level and XP.

03
Ask for hints
A local AI helps without giving the answer.

04
Fix it for real
Open the issue on GitHub and send a pull request.

05
Banish the monster
Paste your PR link to get XP.

06
Rank up
Climb from Rookie Ghost to Grim Reaper.

Hints Cost XP: Help, Not Answers

100%

XP stays

Hint 1

A gentle nudge

75%

XP stays

Hint 2

Which file or keyword to look at

50%

XP stays

Hint 3

An AI draft patch

The AI runs locally on your laptop. The more help you take, the less XP you earn.

Rank Up: From Ghost to Reaper

XP and a progress bar keep you going. Progress is saved in your browser.

How It Works Inside

Repo URL

owner/repo

→

GitHub public API

read-only, no key

→

Gemma (local)

monsters + hints

→

Game screen

map, fight, XP

Fallback

If Ollama is off, rule-based monsters and hints keep it running.

Demo mode

Built-in sample issues work offline or at the GitHub rate limit.

Frontend

Plain HTML, CSS and vanilla JavaScript. No backend.

What You Get

Dungeon map

3 levels, 9 monster types

Local AI

Open-weight Gemma hints

3-level hints

Each hint costs XP

XP and ranks

Progress bar to Grim Reaper

Real PR flow

Defeat monsters with a PR link

Saved progress

Stored in your browser

Offline-friendly

AI fallback and Demo mode

Spooky theme

Pixel-art Halloween look

Run It Locally

```
git clone https://github.com/anshraj3060/haunted-repo.git
cd haunted-repo

# optional, for AI hints
OLLAMA_ORIGINS="*" ollama serve
ollama pull gemma3:4b

# serve the game
python3 -m http.server 8000
```

Open

localhost:8000 in your browser.

No Ollama?

Rule-based hints still work. Hit the rate limit? Click Demo mode.

Limits and What Is Next

TODAY

- Checks that the PR link looks valid
- Does not judge if the fix is correct
- Real maintainers review and merge the PR

NEXT

- Verify the PR with the GitHub API: does it exist, is it linked to the issue
- Bonus XP when the PR is merged

Team ByteForce and How We Built It

TEAM BYTEFORCE

Bosscoder School of Technology

Ansh Raj (Team Lead)

Idea and game design, backend, AI, demo and README

Shriyam Gupta

Frontend, AI and data: issue fetching, Dungeon list, polish, testing, sample data

AI TOOLS USED

Arena AI

Helped write the code one small part at a time. We reviewed and explained every part.

Gemma via Ollama

Local, open-weight. Powers monster names and hints in the game.

Built by two first-year students, with a lot of coffee and one very haunted night.

Haunted Repo

```
$ git commit -m "let's go"
```

Every bug is a ghost. Catch it.
